

# Vetter Saddlebag Spring Clip Kit

Revised June 1, 2009

After 30 years, some of the spring clips that hold Vetter Saddlebags are beginning to crack. We have reproduced them in Stainless Steel. This is a very simple repair job. You get (2) new clips and 4 screws with lock nuts. This is a 15 minute job. Tools needed: Drill with 3/16" bit, Phillips head screwdriver and a 3/8 box end wrench.

(This job can be just as easily done on the bike... but it is easier to see disassembled)

Drill out the two aluminum rivits

Install new spring clip

Replace rivits with the provided 10-32 screws and lock nuts

Tighten screws
